

April in the Garden:

*Prepare beds for new annuals, perennials and vegetables.

Add in Soil Booster, Oyster Shell flour and EB Stone Organics

Sure Start fertilizer before planting.

*Time to Fertilizer Citrus trees with **EB Stone Organics Citrus and Fruit Tree food**. Fertilize heavy feeding Citrus trees every 8 weeks from February through October. Prune trees if needed this month after Frost has passed and plant new Citrus too. Supplement with Chelated Iron to achieve deep, dark green foliage. Dr.Iron or Ironite work well to green up winter hungry Citrus.

*Check all irrigation. Irrigation systems (Drip and sprinkler) can become damaged in the winter months due to freeze-thaw cycles, animal damage or even simply plugged emitters. Don't wait until your plants are stressed due to lack of water. A little time now can save you a lot of work through the summer.

*After Frost has passed, it's time to **plant** Vegetable and Flower transplants. It's also the time to plant large seeds directly into the garden such as beans and sunflowers.
